

## Retail system Line up

### Reference:

The Railing system "LINE UP" should be installed only to flat wall surfaces, because hanging up the acrilian containers to uneven walls can lead to damages at the wall.

### Assembly of railing:

1. Fix the sectional bar (2) together with the wall supports (1) to the wall.

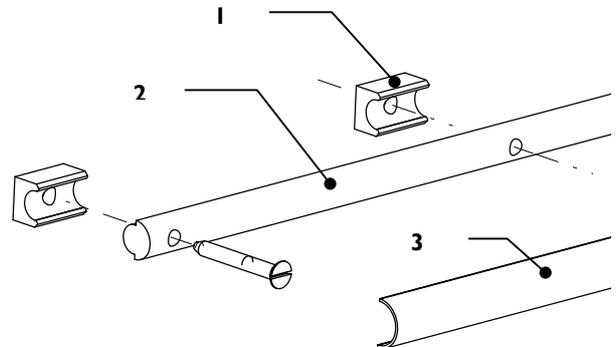

Length 85 mm = 2 wall supports

Length 600 mm = 5 wall supports

Length 1200 mm = 9 wall supports

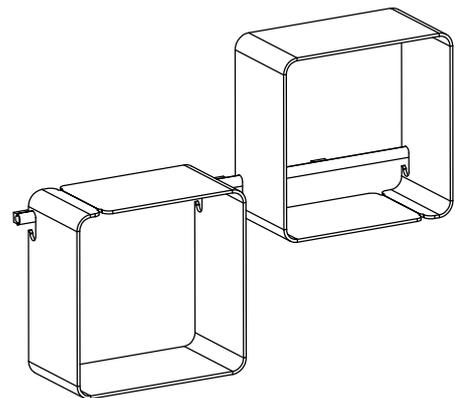

With several borders one above the other an axle base of 285 mm is recommended.

2. Clip on the covering section (3).

### Hanging on containers and boards:

Containers and boards can be hanged on to the railing without tools. The elements with off center arranged hanging up position can be used alternatively downward or above.

### Hanging on shelves and hooks:

1. Push shelf support or hook from down behind the railing and swivel downward. Examine a safe seat.
2. Introduce the glass shelf into the shelf support.
